

PAVYAA SRI S

AI FULL STACK DEVELOPER | GENERATIVE AI APPLICATIONS

Bengaluru, India | +91 91507 66362 | pavyaasris@gmail.com

pavyaasri03.github.io | github.com/pavyaasri03 | LinkedIn: pavyaa-sri-s-5024b23a7

PROFESSIONAL SUMMARY

AI Full Stack Developer building production generative AI applications for education and marketing. Hands-on experience with LLM orchestration, document processing, AI grading and multilingual speech pipelines, backed by Python, TypeScript and full-stack delivery.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL

AI engineering: LLM orchestration, prompt engineering, source grounding, output validation, OCR, speech-to-text, text-to-speech; Gemini, DeepSeek, Claude, Groq

Applications & data: React, Next.js, FastAPI, Node.js, Express, Django, PostgreSQL, Supabase, Firebase/Firestore, MongoDB, MySQL

Testing & delivery: pytest, Vitest, Git, GitHub Actions, Railway, Vercel, FFmpeg, REST APIs, tenant isolation

WORK EXPERIENCE

AI Full Stack Developer | Arivu Educational Consultants Pvt. Ltd. (ArivuPro)

Bengaluru, India | May 2026 - Present

- **AI assessment:** Built a document-to-quiz pipeline with chunked extraction, LLM generation, verification and repair, teacher review, and publishing; validated large-document processing on a 98-page source.
- **Grading & isolation:** Implemented deterministic objective scoring and model-answer-based AI grading for descriptive responses; enforced tenant-scoped queries with isolation regression tests.
- **Multilingual speech:** Built LingoCut dubbing and script-to-voiceover workflows for 12 code-switched dialects using Gemini and FFmpeg, with segment timing, retries and checkpointed processing.
- **AI reliability:** Traced missing voiceover sentences to text segmentation; replaced a lossy parser and verified text retention with automated TTS-to-transcription round-trip checks.
- **Marketing intelligence:** Shipped MarketInsight Pro with social listening across 8+ sources, LLM sentiment/relevance classification, fact-grounded reply drafts and human review; added retry/backoff and historical analytics.
- **Academic platform:** Delivered faculty self-onboarding, retroactive class assignment and timetable scheduling for three user roles, including overlap detection, API routes and database changes.
- **Production delivery:** Resolved quiz-start failures caused by response-model and query mismatches; used feature flags, regression tests and server-side API proxies to support reliable releases.

SELECTED PROJECTS

AI Answer Sheet Evaluation | React, FastAPI, Claude Vision

Built image preprocessing and model orchestration for handwritten/printed answer evaluation, with question-level marks, feedback and a student results dashboard.

Biometric Voting System | Node.js, MongoDB

Developed fingerprint-based voter verification and modular REST APIs; tested input validation and duplicate-vote prevention.

Institutional LMS | Moodle, PHP, MySQL

Collaboratively customized and deployed a Moodle LMS for departmental assignments, resource sharing and student/faculty profiles.

Complaint Registration System | Django, MySQL

Built authenticated CRUD workflows with form validation, modular views and reusable templates.

EDUCATION

Master of Computer Applications | 2023 - 2025 | CGPA: 9.67/10

Marudhar Kesari Jain College for Women, Vaniyambadi

B.Sc. Computer Science | 2020 - 2023 | CGPA: 9.0/10

Marudhar Kesari Jain College for Women, Vaniyambadi

TRAINING & ACHIEVEMENTS

Machine Learning Internship (30 days): Python, preprocessing, supervised ML.

NPTEL: Database Management Systems | Best Student Award: Mahindra Naandi Foundation
